PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with comprehensive experience designing, building, and optimizing scalable web applications in the logistics and Software as a Service (SaaS) industries. Proficient in JavaScript, TypeScript, React.js, Next.js, Node.js, PostgreSQL (PERN stack), and MongoDB (MERN stack). Demonstrated expertise in developing event-driven microservices, designing RESTful APIs, implementing secure authentication systems, and orchestrating automated CI/CD pipelines. Collaborates effectively across cross-functional teams, combining technical systems design with strategic product thinking.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, C++

Frontend Architecture: React.js, Next.js, React Native (Expo), HTML5, CSS3, Tailwind CSS, Redux Toolkit, GraphQL

Backend & Microservices: Node.js, Express.js, FastAPI, RESTful APIs, WebSockets, Event-Driven Architecture

Authentication & Security: JSON Web Token (JWT), Open Authorization (OAuth 2.0), Role-Based Access Control (RBAC)

Databases & ORMs: PostgreSQL, MongoDB, MySQL, Redis, Prisma ORM, Neon Serverless PostgreSQL

DevOps & Cloud Operations: Docker, Kubernetes, Amazon Web Services (AWS) (EC2, S3), CI/CD (GitHub Actions), Vercel

Message Brokers: RabbitMQ, Apache Kafka

Developer Tools: Git, GitHub, Postman, Turborepo, Monorepo Architecture, Linux, Agile/Scrum, System Design

PROFESSIONAL EXPERIENCE

NexoGrafix Private Limited

Junior Software Engineer

Patna, India

Apr 2026 - Present

- Created a Microsoft Word add-in in TypeScript using the Office.js API to automate style enforcement, reducing manual formatting effort by 60% across a 15-person editorial team.
- Architected a full-stack document conversion platform using FastAPI and React, deploying four microservices that cut manual processing turnaround time by 45%.
- Constructed XML and EPUB processing services supporting JATS and DocBook schemas, automating Table of Contents (TOC) generation and lowering QA review time by 35%.

ShipU Logistics Private Limited

Software Engineer Intern

Patna, India

Sep 2025 - Mar 2026

- Designed a high-throughput logistics management platform featuring real-time shipment tracking, delivery workflows, and secure RBAC leveraging a PostgreSQL and Node.js (PERN) architecture, improving database query performance by 25%.
- Deployed scalable, event-driven microservices using RabbitMQ and Docker containers across three AWS environments, accelerating deployment velocity by 30%.
- Restructured the engineering codebase into a high-efficiency Turborepo monorepo, sharing common utility packages across six core services and cutting duplicate code by 35%.

Shabra Softech Solution Pvt. Ltd.

Software Engineer Intern

Patna, India

Feb 2025 - Aug 2025

- Migrated a legacy MERN (MongoDB, Express.js, React.js, Node.js) monolith system to a modern Turborepo monorepo ecosystem, increasing code reusability across platforms by 40%.
- Programmed production-ready Next.js web applications and React Native mobile applications serving over 1,000 active users, utilizing centralized, shared component libraries.
- Secured sensitive user access points by implementing robust JWT, OAuth 2.0, and strict RBAC protocols, minimizing login-related support tickets by 50%.

PROJECTS

Aetheria – Real-Time 2D Multiplayer Sandbox World

github.com/ayush931/Aetheria

- Engineered a real-time state synchronization pipeline using Socket.io and Phaser.js, sustaining smooth 60 Frames Per Second (FPS) rendering for over 50 concurrent active players.
- Integrated peer-to-peer WebRTC proximity voice channels, interactive multiplayer canvas systems, and persistent drag-and-drop customization grids.
- Established a zero-config database layer utilizing serverless Neon PostgreSQL, implementing an automated local fallback system that cut developer onboarding time by 90%.

Excalidraw Clone – Real-Time Collaborative Whiteboard

github.com/ayush931/excalidraw

- Authored a collaborative digital whiteboard platform using Next.js, WebSockets, and Turborepo, enabling concurrent multi-user editing with sub-100ms synchronization latency.
- Optimized canvas rendering pathways through React memoization and granular state diffing, decreasing unnecessary component re-renders by 60% and lowering query latency by 40%.

RideSync – Real-Time Ride Booking Application

github.com/ayush931/cab-application

- Developed a full-stack, cross-platform ride-hailing mobile application utilizing React Native (Expo) coupled with live GPS tracking infrastructure and WebSocket messaging.
- Enabled secure user authentication flows using Clerk and optimized relational database queries to Neon PostgreSQL to execute with sub-200ms round-trip times.

EDUCATION

IIT Patna and IIIT Ranchi

Master of Computer Applications (MCA)

Patna and Ranchi, India

2026 - Present

Impact College, Aryabhata Knowledge University

Master of Business Administration (MBA) – Marketing (CGPA: 8.61/10)

Patna, India

2025

B.D. College, Patliputra University

Bachelor of Science (Honours) – Chemistry (60.4%)

Patna, India

2023
